

Thrust 1: Application-specific Trusted Execution Domains

- Explicit resource composition
- Hardware-assisted isolation
- Remote attestation of domain configuration

Thrust 2: Scalable Runtime Trust Attestation

- Control-flow and task evidence
- Protected measurement state
- Efficient verifier algorithms

Thrust 3: Evidence-Guided Trust Containment and Recover

- Verification-aware compartments
- Authenticated boundaries
- Selective recovery and re-attestation

Unified Trust Lifecycle

Construct application-specific trusted environments; attest runtime behavior;
contain localized compromise; and selectively recover affected domains.
